EXPERIMENT - 4

Data Modelling and Form Design for a Business Application in Zoho Creator

Loan Application & Pre-Screening Management

Application Name	Loan Application & Pre-Screening Management
Form Name	Loan_Application_Form
Report Name	Loan_Application_Report
Student Name	DAKSHESH N
Student Roll No.	241401017
Experiment	4
Platform	Zoho Creator

Lab Record
Design and validate a loan enquiry form using all thirteen Basic Fields, four logical sections and a report containing three fictional test applications.

Department of Computer Science and Engineering

Rajalakshmi Engineering College

1. Objective and Problem Statement

To implement a structured loan enquiry form in Zoho Creator using all thirteen Basic Field types and verify that valid submissions appear in the application report.

Paper-based loan enquiries can contain incomplete contact or income details and delay document verification. The application collects consistent applicant, employment, income and loan information for a loan officer to review. It does not approve a loan or perform a credit bureau check.

2. Scope and Data Model

Component	Implementation
Application	Loan Application & Pre-Screening Management
Primary entity	One Loan_Application_Form record represents one loan enquiry. Creator supplies a unique record ID.
Form layout	Section A: Personal Details; B: Contact Details; C: Income & Employment Details; D: Loan Details & Consent.
Report	Display name: Loan_Application_Report. Existing internal link: Loan_Application_Form_Report.
Users	Prospective applicant, Loan Officer and application Admin. Access remains authenticated; no public publication was performed.
Data	Three new mock records plus four existing records retained. No additional tables or relationships are needed for this minimal use case.

3. Software and Prerequisites

Zoho Creator in a web browser; an authorized Creator account; the existing Loan Application project; the supplied L7 loan Applications specification. Form, report and internal field links were inspected before changes.

Existing work retained: the application, form, thirteen field types and existing records. Missing section organisation and required validation behaviour were completed without rebuilding the application.

4. Basic Field Dictionary

Visible labels follow the required business meaning. Existing internal links are retained so reports and Deluge references continue to work. The source PDF uses conceptual names, which need not equal an existing field link.

Basic type	Visible field / purpose	Actual field link
Name	Applicant Name; first and last name	applicant_name
Email	Email Address; acknowledgement address	Email
Address	Residential Address; postal details	Address1
Phone	Contact Number; country code enabled	Phone_Number
Single Line	PAN Number; optional short text	PAN_Number1
Multi Line	Purpose of Loan; free-text description	Purpose_of_Loan
Number	Monthly Income; positive amount	Monthly_Income
Date	Date of Birth; age check	Date_Of_Birth
Time	Preferred Callback Time	Preferred_Callback_Time
Drop Down	Loan Type; one loan category	Loan_Type
Radio	Employment Type; Salaried / Self-Employed	Employment_Type
Multi Select	Existing Liabilities; multiple choices	Existing_Liabilities
Checkbox	I consent to a credit bureau check; Yes	I_consent_to_a_credit_ bureau_check

Section A contains Name, Date and Single Line. Section B contains Email, Phone and Address. Section C contains Radio, Number and Multi Select. Section D contains Drop Down, Multi Line, Time and Checkbox.

5. Configuration and Validation

1. Open the existing application and edit Loan_Application_Form. Retain its existing field links and thirteen Basic Fields.

2. Group fields into Sections A-D in the order shown in the specification. Use clear labels and preserve the Indian phone country code.

3. Mark Applicant Name, Date of Birth, Contact Number, Employment Type, Monthly Income, Loan Type and credit-check consent as mandatory.

4. Keep built-in email format validation. Add the on-validation Deluge checks documented in Experiment 6 for age, income and consent.

5. Open the live form and submit only fictional examples. Open Loan_Application_Report to verify the new records.

Rule	Configured behaviour
Age	Date of Birth must be on or before today minus 18 years.
Monthly income	Reject zero or negative values.
Consent	Yes must be selected before submission.
Email / phone	Email field checks syntax; Phone field displays +91. This does not verify ownership.
PAN	Optional short-text field. MOCKPAN values are deliberate test labels, not real identity data.

6. Test Data and Observations

Mock applicant	Date of birth	Employment	Income	Loan type
Mock Applicant One	01-Jan-1995	Salaried	55,000	Home Loan
Mock Applicant Two	15-Jun-1990	Self-Employed	35,000	Business Loan
Mock Applicant Three	06-Oct-2008	Salaried	25,000	Education Loan

The three records use example.com email addresses and an all-zero phone placeholder. The third record verifies the exact 18-year boundary on 06-Oct-2026. All examples are fictional.

7. Implementation Evidence - Form Builder

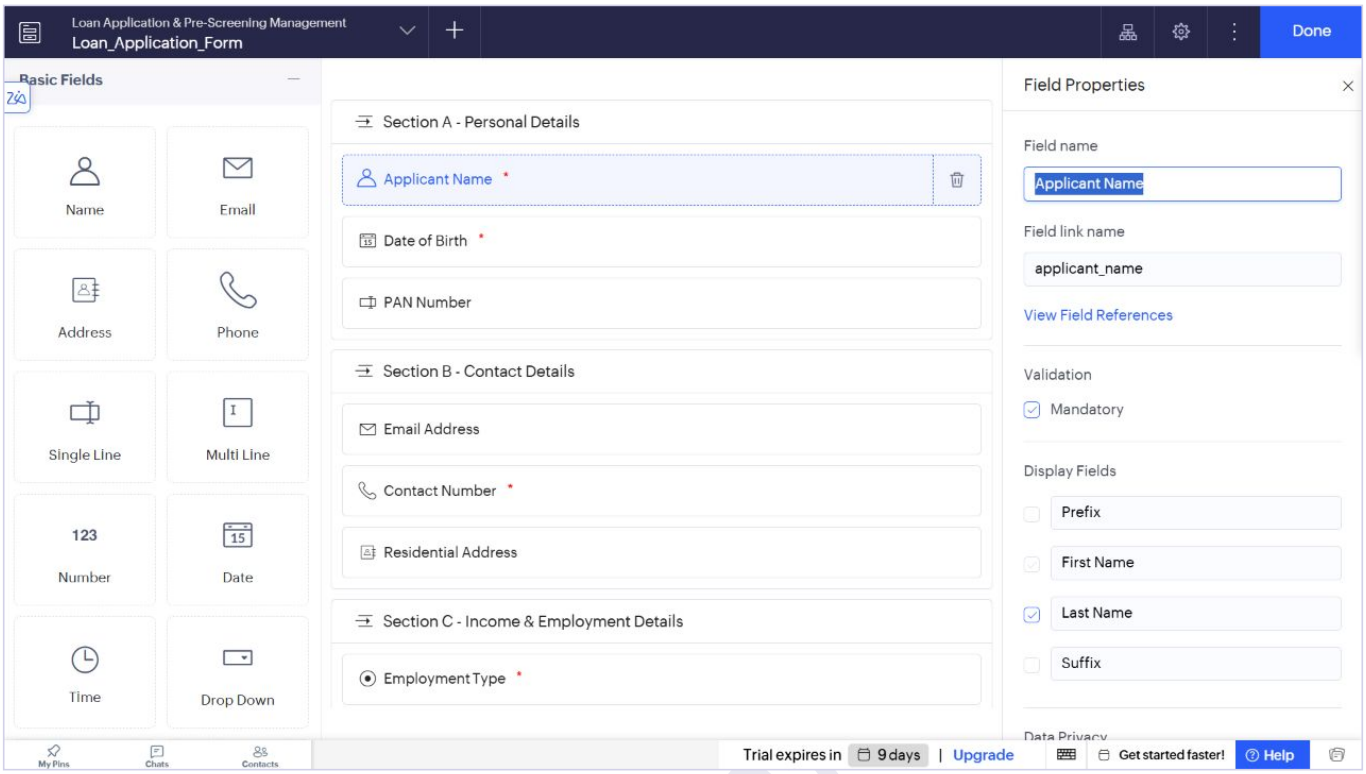

Figure 4.1 - Existing form designer: Personal and Contact Details; Applicant Name is mandatory.

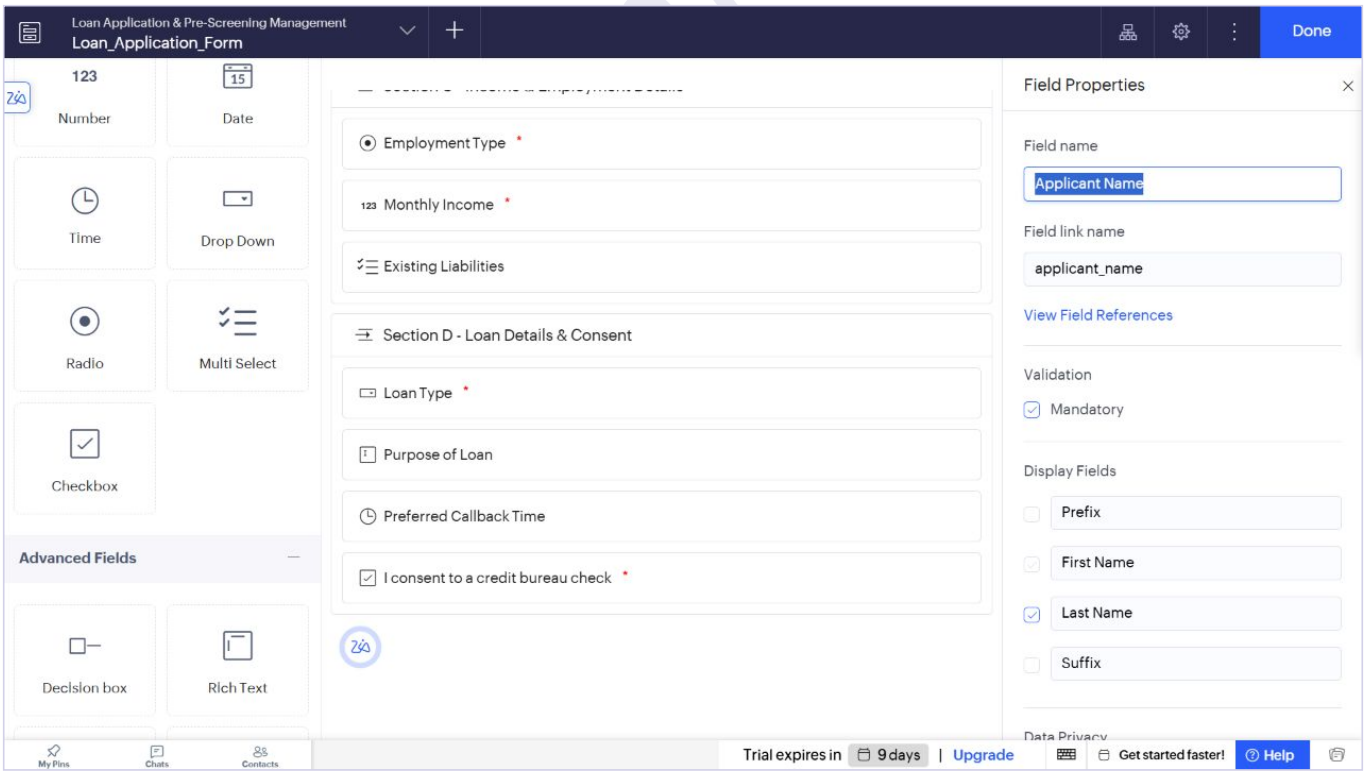

Figure 4.2 - Income, employment, loan and consent fields; lower Basic Field palette.

8. Implementation Evidence - Live Form

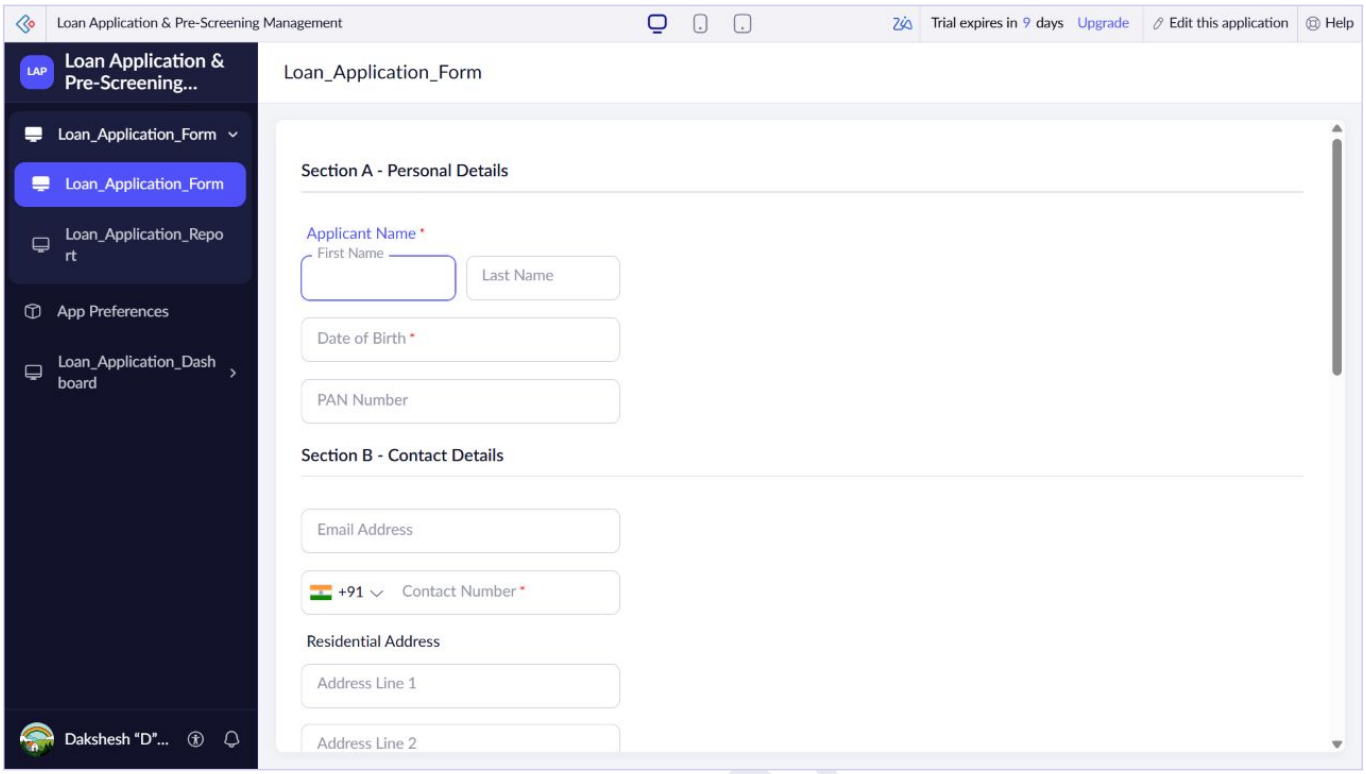

Figure 4.3 - Live Personal and Contact Details, including required fields and +91 phone format.

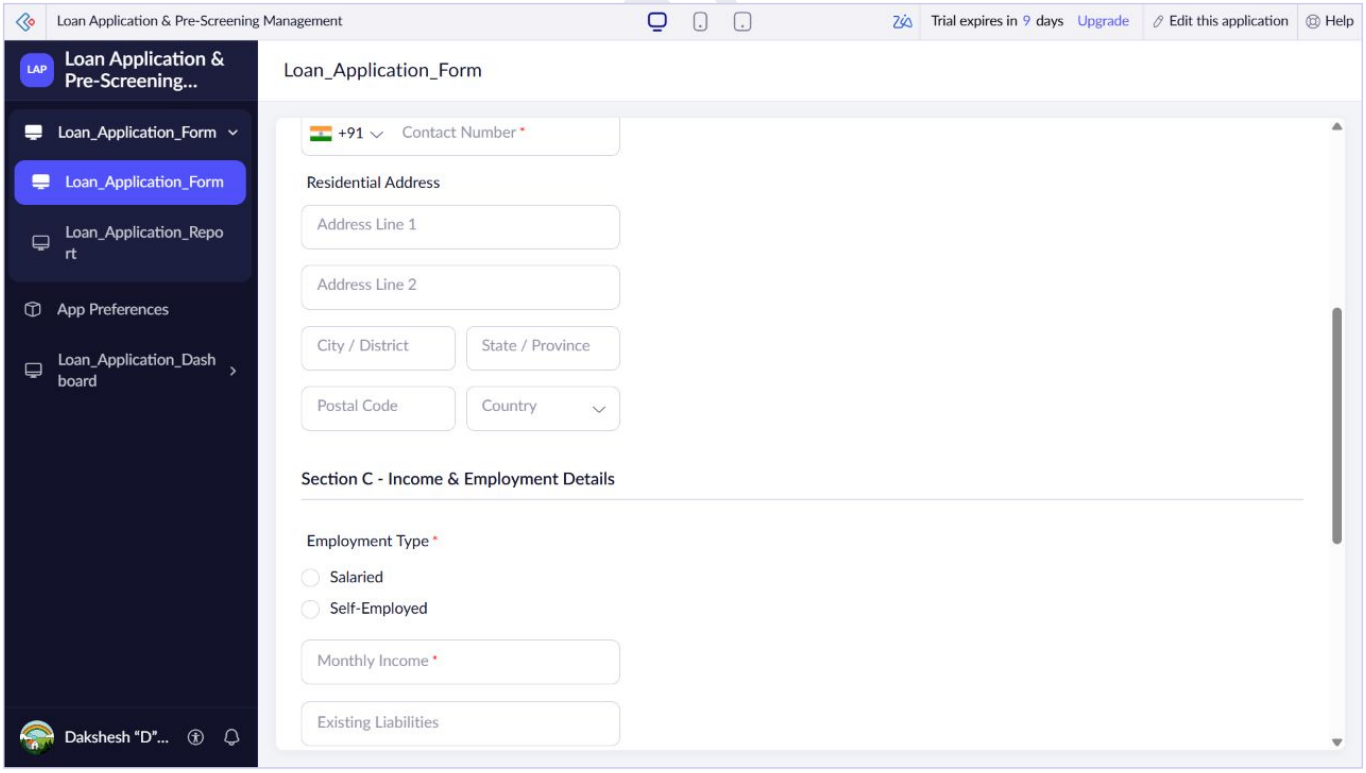

Figure 4.4 - Live address and Income & Employment section.

9. Implementation Evidence - Submission

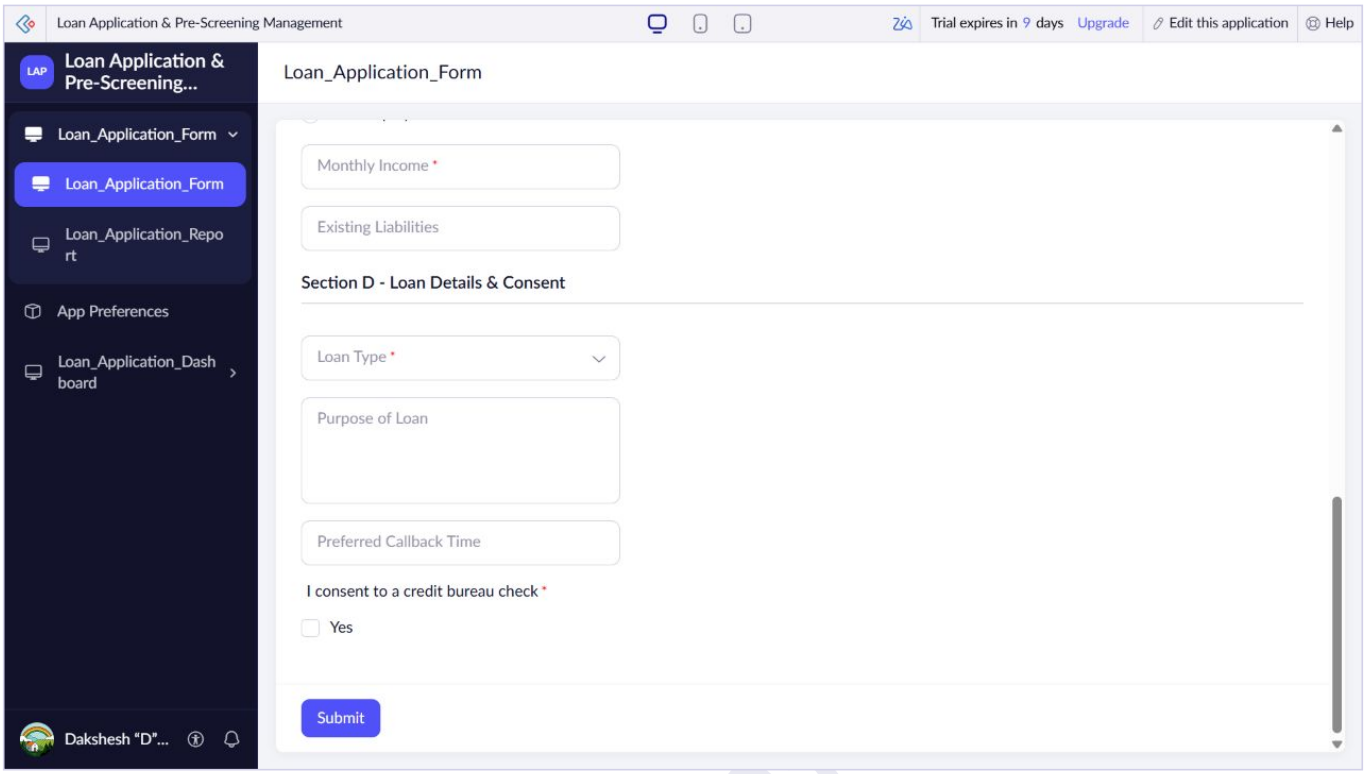

Figure 4.5 - Live Loan Details & Consent section and Submit control.

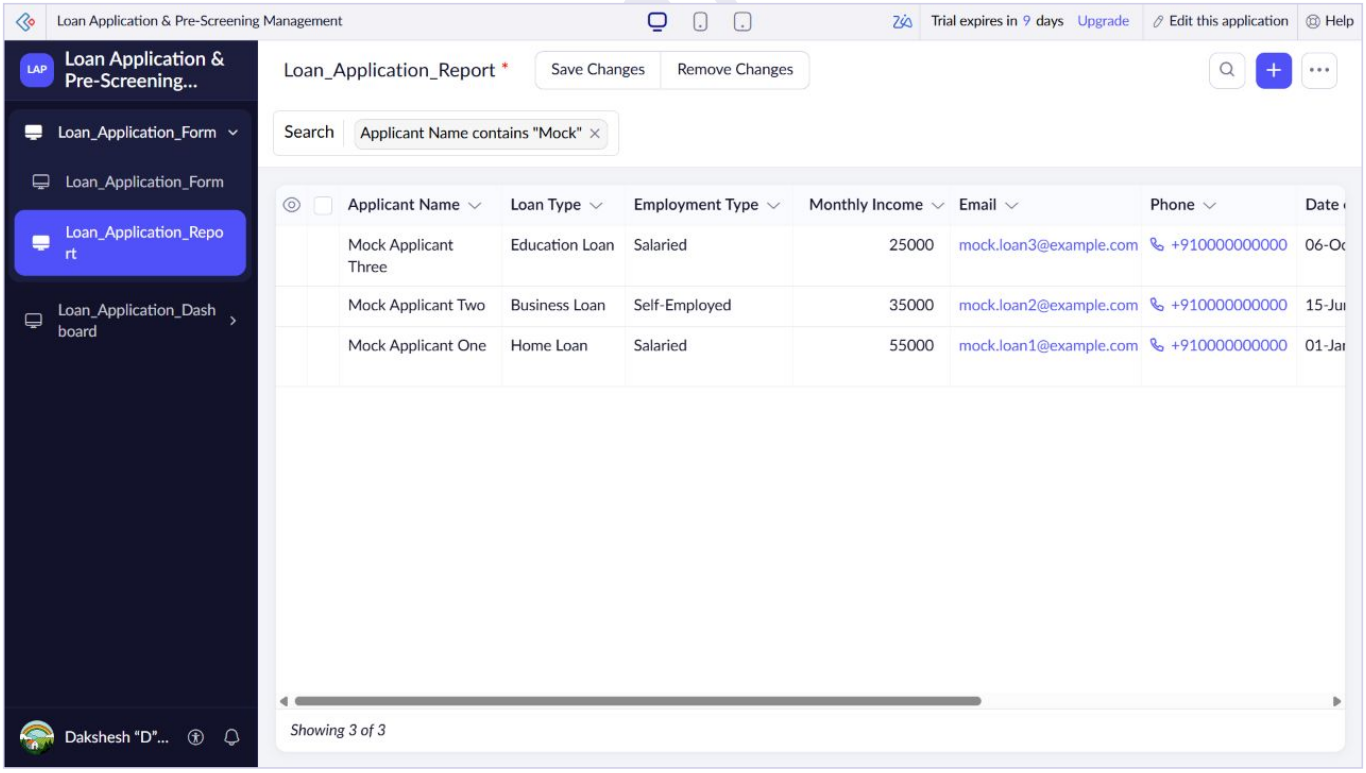

Figure 4.6 - Loan_Application_Report filtered to the three submitted mock applications.

10. Income and Consent Validation Evidence

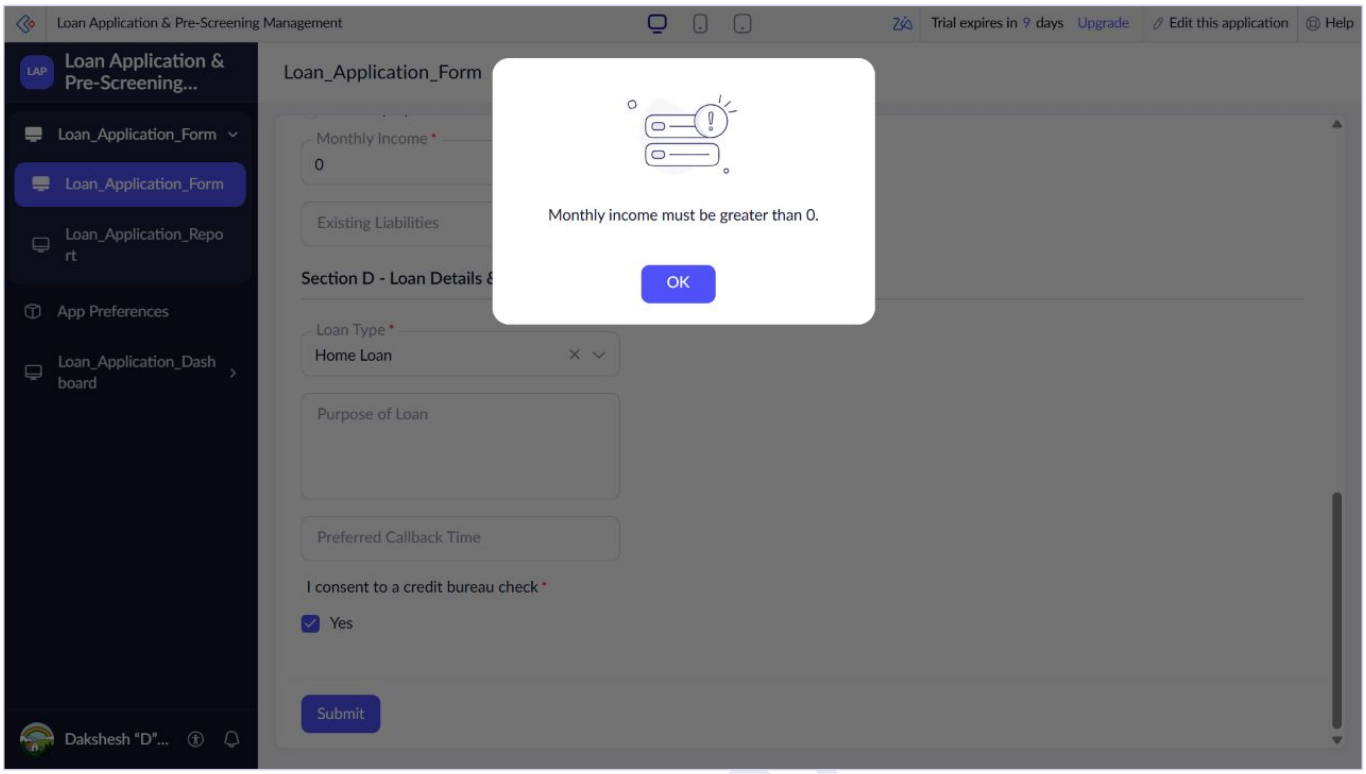

Figure 4.7 - Monthly Income = 0 is rejected with the positive-income alert.

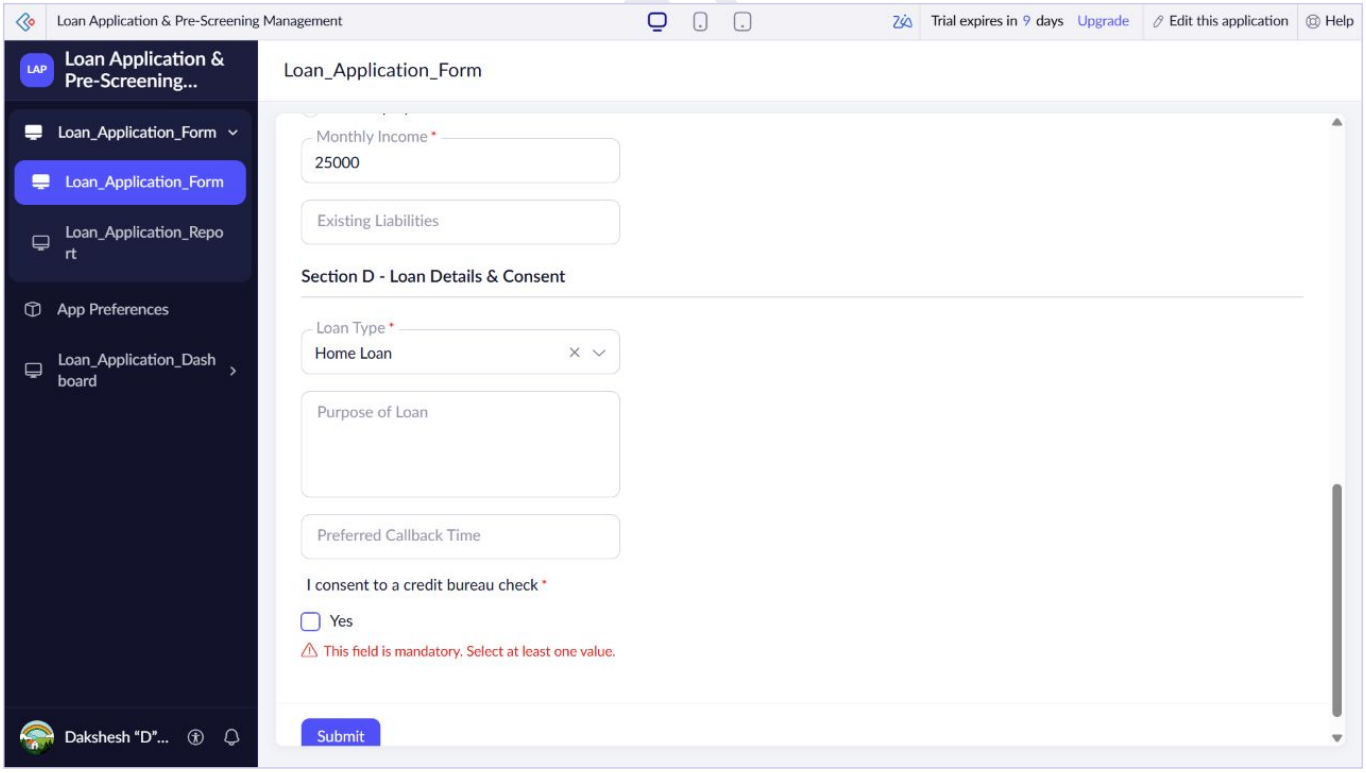

Figure 4.8 - Unchecked consent is rejected with a mandatory-field error.

11. Age Validation Evidence and Result

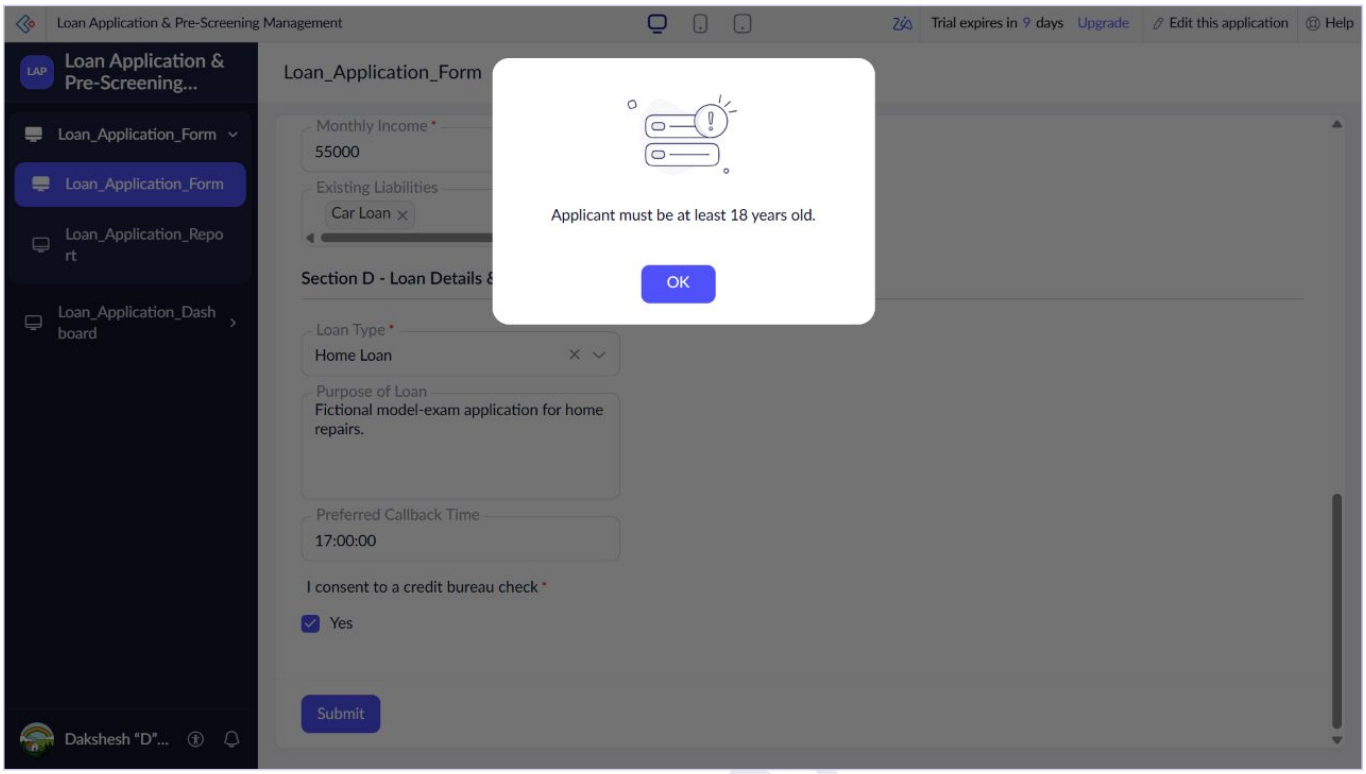

Figure 4.9 - An under-age mock applicant is rejected before the record is saved.

Check	Observed result
DOB 01-Jan-2015	Rejected with the age 18+ alert.
Monthly income = 0	Rejected with positive-income validation.
Consent unchecked	Rejected by mandatory consent validation.
Three valid mock applications	Saved successfully and visible in the report.

12. Result and Learning Outcomes

The form demonstrates all thirteen Basic Fields across four sections. Mandatory, format and submission checks were configured, and three valid mock applications were stored. The existing application and four older records were preserved.

Learning outcomes: select appropriate field types, group related inputs, preserve internal links, validate before saving and verify submitted data in a report.
