EXPERIMENT - 8

Basic Role-Based Access Control and User Permissions

Loan Application & Pre-Screening Management

Application Name	Loan Application & Pre-Screening Management
Form Name	Loan_Application_Form
Report Name	Loan_Application_Report
Student Name	DAKSHESH N
Student Roll No.	241401017
Experiment	8
Platform	Zoho Creator

Lab Record
Configure Admin, Loan Officer and Applicant roles with minimal application permissions, and document the distinction between saved configuration and separate-user access testing.

Department of Computer Science and Engineering

Rajalakshmi Engineering College

1. Objective and Access Design

To separate submission, application review and record administration using a simple role hierarchy and permission sets. Permissions are limited to this application; no users were invited or assigned during the experiment.

Concept	Implemented design
Role hierarchy	Existing CEO retained, with Admin > Loan Officer > Applicant underneath.
Permission sets	Admin, Loan Officer and Applicant added. Existing Read and Write profiles retained.
Peer sharing	Share Data with Peers left unchecked for the new roles.
API access	Disabled for each new permission set.
User assignment	Pending. Creating a role or permission set does not assign it to a person.

2. Minimum Permission Matrix

Capability	Admin	Loan Officer	Applicant
Submit new application	Yes	No	Yes
View application report	Yes	Yes	No
Edit report records	Yes	Yes	No
Delete report records	Yes	No	No
More actions	No	No	No
View dashboard	Yes	Yes	No
Open help page	Yes	Yes	Yes
API access	Disabled	Disabled	Disabled

Admin is a record-management permission set, not an organization administrator or developer-account grant. View/Edit/Delete selections target Loan_Application_Report. Access to actual records also depends on user assignment and data-sharing rules.

Test scope: saved roles and module permissions were inspected. Separate Applicant, Loan Officer and Admin login sessions were not available, so runtime access and record visibility remain unverified.

3. Procedure and Saved Configuration

1. Open Settings > User Permissions and inspect the existing Read and Write profiles.

2. Add the three minimal permission sets shown in the matrix. Restrict Applicant to form submission and the help page.

3. Allow Loan Officer to view and edit the report and access dashboard/help; keep add, delete and extra actions off.

4. Allow Admin to add, view, edit and delete application records and access both pages. Keep API access off.

5. Add Admin, Loan Officer and Applicant roles under the retained CEO hierarchy. Leave peer sharing off and save the configuration.

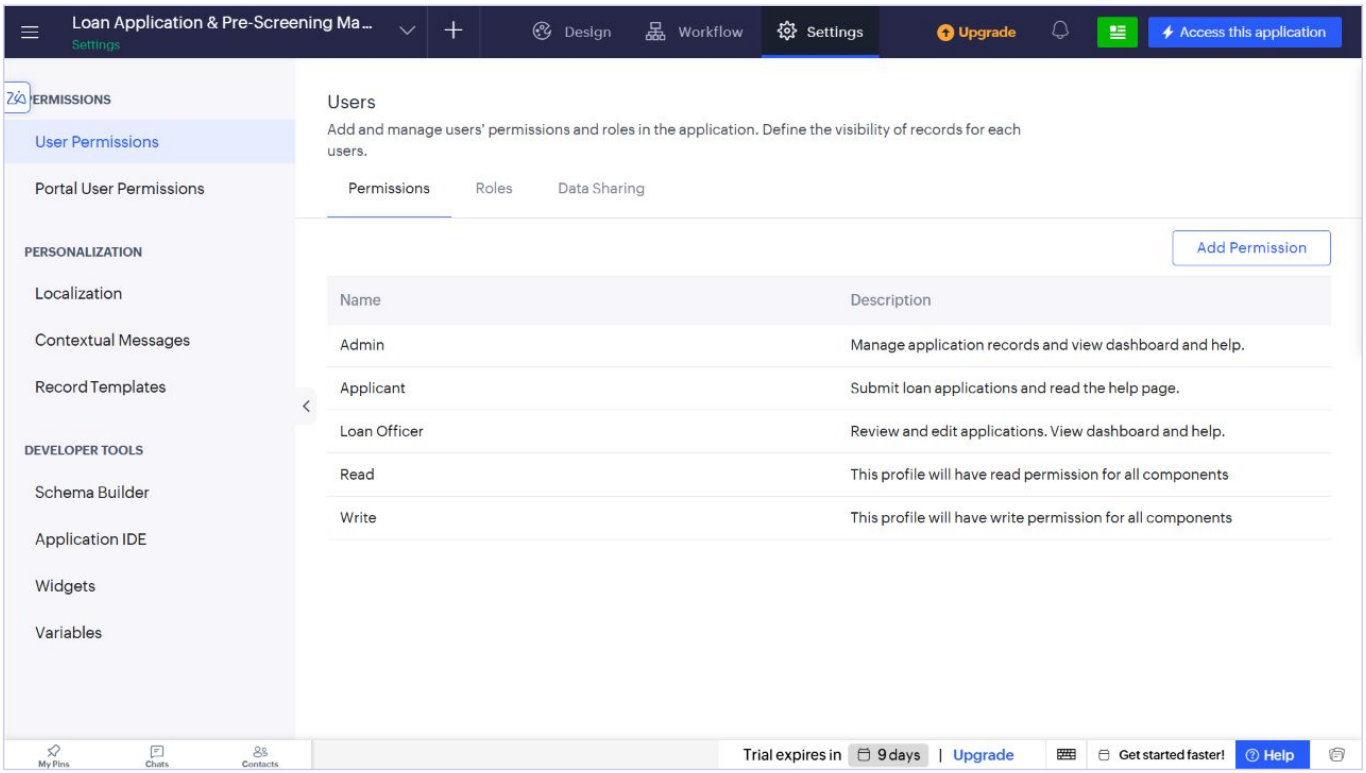

Figure 8.1 - Three saved permission sets alongside the original Read and Write profiles.

No invitation, license purchase, account-level administration change or public sharing was required. The saved configuration can be assigned to eligible test users later with the account owner's approval.

4. Role Hierarchy Evidence

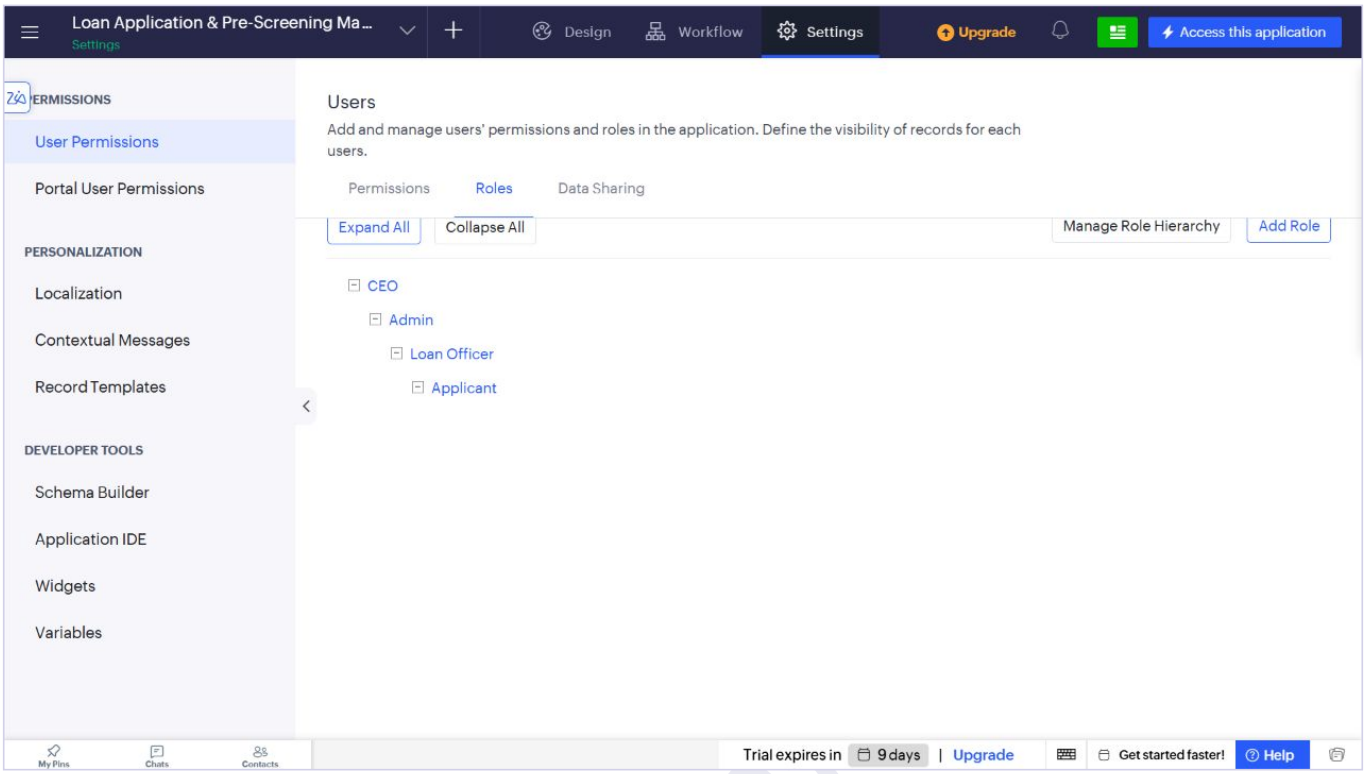

Figure 8.2 - CEO > Admin > Loan Officer > Applicant role hierarchy.

Roles and Permission Sets Are Different

A role places a user in an organizational hierarchy and can affect record visibility. A permission set controls operations such as adding, viewing, editing and deleting records, and access to pages. A user must be assigned both appropriately for the intended behaviour.

The hierarchy is intentionally small for the model exam. Data Sharing settings were not changed. Do not assume that a role name alone grants report access or that all loan records will be visible to an untested Loan Officer account.

> Observe the indentation of Admin, Loan Officer and Applicant. It provides configuration evidence for the hierarchy, not proof of effective permissions in a separate login session.

5. Applicant Permission Evidence

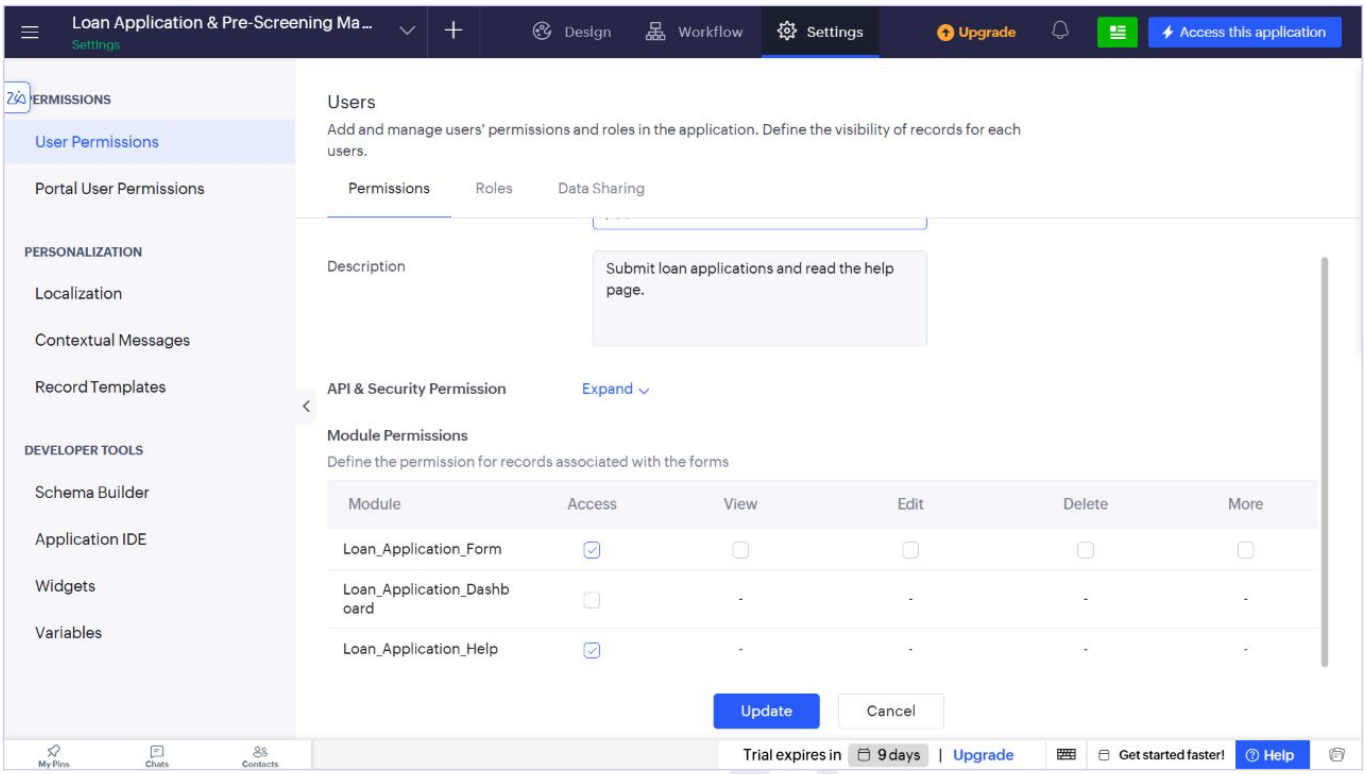

Figure 8.3 - Applicant: form access and Help enabled; View, Edit, Delete and Dashboard disabled.

Applicant action	Intended result after assignment
Open and submit form	Allowed; required field and validation rules still apply.
Read all submitted applications	Denied by this permission set.
Edit or delete existing records	Denied.
View dashboard	Denied.
Read the help page	Allowed.

These are configured permissions. A separate Applicant login is still needed to verify the resulting menu and direct-link behaviour.

6. Loan Officer Permission Evidence

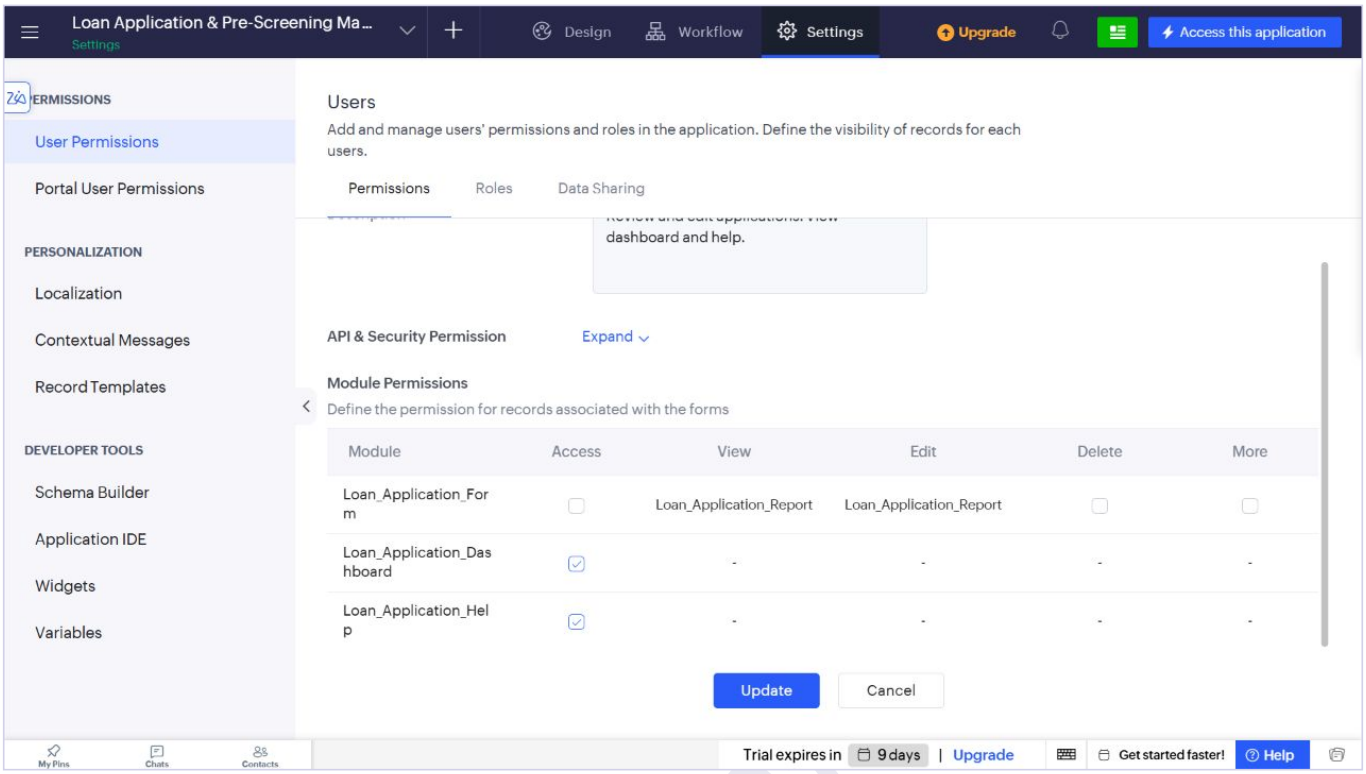

Figure 8.4 - Loan Officer: report View/Edit selected; Dashboard and Help enabled; Add/Delete off.

Loan Officer action	Intended result after assignment
Review report records	Allowed for records visible under applicable sharing rules.
Edit application details	Allowed through Loan_Application_Report.
Create or delete records	Not allowed by this permission set.
View dashboard and help	Allowed.

The View and Edit cells display the selected report name. Runtime record visibility must still be checked using an assigned Loan Officer user.

7. Admin Permission Evidence

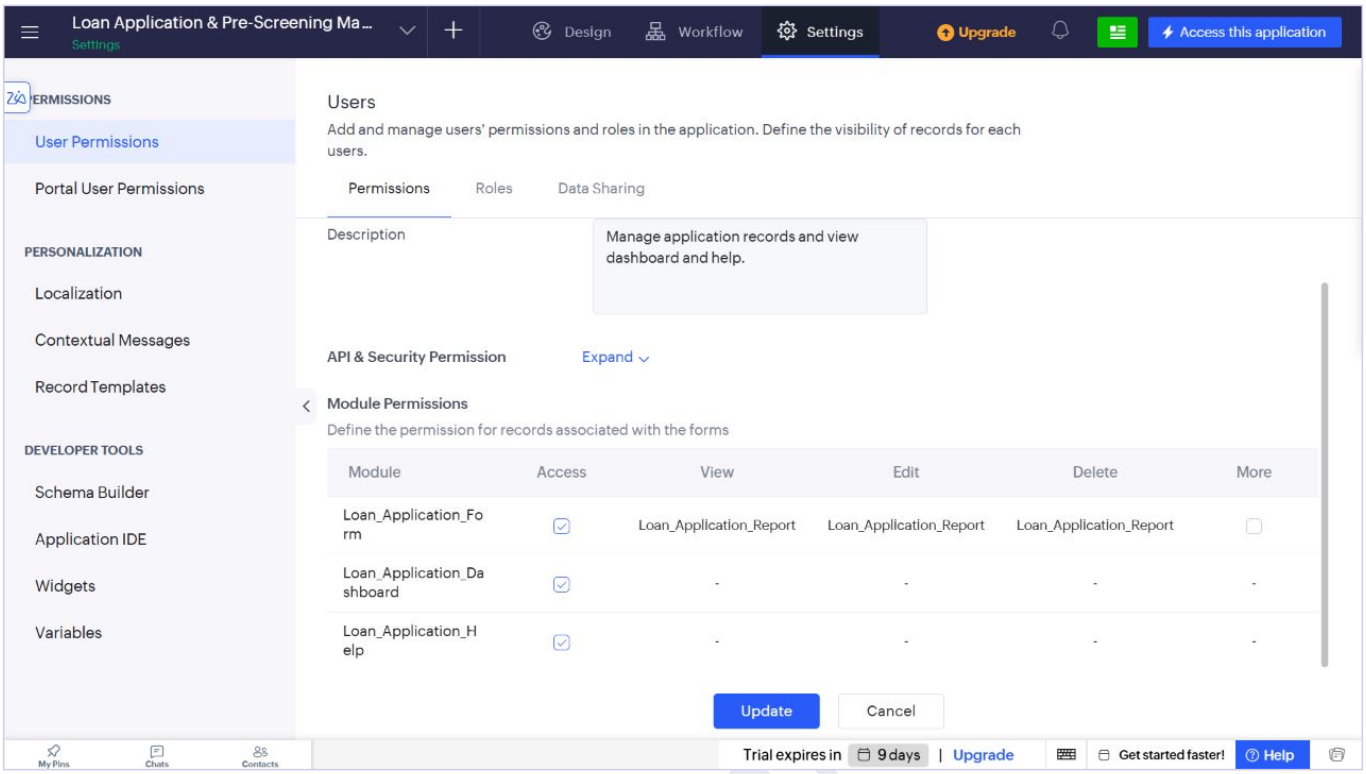

Figure 8.5 - Admin: Add and report View/Edit/Delete selected; Dashboard and Help enabled.

Admin action	Configured result
Create an application	Allowed.
View, edit and delete report records	Allowed within this application.
View dashboard and help	Allowed.
Extra / API actions	More disabled; API access disabled.
Organization/account administration	Not granted by this permission set.

No delete operation was executed during the demonstration. Existing records were preserved.

8. Verification, Result and Manual Actions

Verification item	Status / observation
Three permission sets saved	Completed; visible in settings.
Role hierarchy saved	Completed; all three roles visible beneath CEO.
Module selections inspected	Completed; matrix matches the saved UI.
Eligible users assigned roles and profiles	Pending; no user invitations or assignments made.
Applicant runtime access	Not tested in a separate login.
Loan Officer record visibility and edit access	Not tested in a separate login.
Admin runtime access	Not tested in a separate login.

9. Suggested Manual Access Test

1. With the account owner, select eligible test users and assign one role plus the matching permission set to each.

2. Log in as Applicant. Verify submission and Help access, and verify that report, dashboard, edit and delete are unavailable.

3. Log in as Loan Officer. Verify report visibility, permitted edits and dashboard access; confirm that add/delete remain unavailable.

4. Log in as Admin. Verify the intended record-management controls without deleting existing work. Record actual results and capture evidence for each test account.

241401017

10. Result and Learning Outcomes

A minimal RBAC configuration is saved for the Loan Application project. Roles and permission sets were created and inspected without assigning new users. Runtime verification remains a manual follow-up.

Learning outcomes: distinguish hierarchy from permissions, apply minimum access, preserve existing profiles, and avoid claiming access enforcement solely from configuration screenshots.
