

EXPERIMENT – 4

Data Modelling and Form Design for a Business Application in Zoho Creator

Loan Application & Pre-Screening Management

Application Name	Loan Application & Pre-Screening Management
Form Name	Loan_Application_Form
Report Name	Loan_Application_Form_Report
Student Name	DAKSHESH N
Student Roll No.	241401017
Experiment	4
Platform	Zoho Creator

Lab Record

A low-code business application designed to collect, validate, and organize loan enquiries using all thirteen Basic Fields available in the Zoho Creator Form Builder, with submitted applications available for review and pre-screening.

Department of Computer Science and Engineering

Rajalakshmi Engineering College

1. Objective

To design and build a functional **Loan Application & Pre-Screening Management** application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields in the Form Builder while addressing the practical need to collect structured borrower information for preliminary loan processing.

2. Problem Statement

A bank branch traditionally accepts loan applications through paper forms filled at the counter. This can lead to illegible handwriting, incomplete income details, and delays in routing applications to the appropriate loan officer. There is also no structured digital pre-screening step before the applicant is called for document verification.

The proposed solution is a single online loan application form that captures personal identity, contact information, employment and income details, loan requirements, existing liabilities, and consent for a credit check. The submitted information is stored as a structured record that loan officers can review and filter.

3. Scope of the Use Case

Application	Loan Application & Pre-Screening Management
Form	Loan_Application_Form
Primary Users	Prospective borrowers / Bank loan officers
Report View	Loan_Application_Form_Report
Report Objective	Review, filter, pre-screen, and route loan applications for document verification and approval

4. Business Data Model

The form acts as the primary data-entry interface. Each field represents a business attribute of a loan application. When the applicant submits the form, the collected values become a structured record in the report, allowing bank personnel to review applications and perform preliminary screening.

Core entity: Loan Application → Applicant details + Contact details + Employment & income + Loan requirements + Existing liabilities + Credit-check consent.

5. Basic Field Mapping – All 13 Fields

The following design uses every Basic Field listed in the exercise and assigns each one a clear role in the bank loan application.

#	Basic Field	Form Field Name	Purpose / Example
1	Name	Applicant_Name	Applicant's first and last name; e.g., Suresh Raghavan
2	Email	Email_Address	Validated email for application status updates
3	Address	Residential_Address	Applicant's complete residential address
4	Phone	Contact_Number	Mobile number for bank communication
5	Single Line	PAN_Number	Short PAN entry / identity reference
6	Multi Line	Purpose_Of_Loan	Detailed description of intended use of the loan
7	Number	Monthly_Income	Applicant's gross monthly income
8	Date	Date_Of_Birth	Date of birth used for age eligibility
9	Time	Preferred_Callback_Time	Preferred time for loan-officer callback
10	Drop Down	Loan_Type	Single loan product such as Home Loan
11	Radio	Employment_Type	One employment category: Salaried / Self-Employed
12	Multi Select	Existing_Liabilities	One or more existing loans or financial commitments
13	Checkbox	Consent_For_Credit_Check	Applicant's authorization for a credit bureau check

6. Section-wise Form Design

Section A – Personal Details	Applicant_Name; Date_Of_Birth; PAN_Number
Section B – Contact Details	Email_Address; Contact_Number; Residential_Address
Section C – Income & Employment Details	Employment_Type; Monthly_Income; Existing_Liabilities
Section D – Loan Details & Consent	Loan_Type; Purpose_Of_Loan; Preferred_Callback_Time; Consent_For_Credit_Check

7. Validation Rules

Field	Validation / Configuration
Applicant_Name	Mandatory; captures first and last name.
Contact_Number	Mandatory; phone field with Indian country-code format.
Date_Of_Birth	Mandatory; date must represent an applicant who is at least 18 years old.
PAN_Number	Single-line field for short identity text.
Employment_Type	Mandatory; exactly one radio option.
Monthly_Income	Mandatory; number field with a value greater than 0.
Loan_Type	Mandatory; one value from the drop-down list.
Email_Address	Built-in email format validation.
Consent_For_Credit_Check	Mandatory; form submission is blocked unless checked.

8. Workflow Summary

1. Applicant opens the public **Loan_Application_Form** link shared by the bank.
2. Applicant enters personal, contact, employment, income, loan, liability, and callback details.
3. Zoho Creator validates mandatory fields and field formats before submission.
4. A new loan-application record is created in the report.
5. An acknowledgement email can be triggered using **Email_Address**.
6. Loan officers review the report and filter applications by **Loan_Type** and **Monthly_Income**.
7. Applicants can then be contacted at the preferred callback time for document verification.

9. Sample Business Record

Attribute	Sample Value
Applicant_Name	Suresh Raghavan
Email_Address	suresh.raghavan@example.com
Contact_Number	+91 94430 22110
Residential_Address	18, Lake View Road, Trichy, TN, 620001
Date_Of_Birth	22-Jan-1990
PAN_Number	ABCDE1234F
Employment_Type	Salaried
Monthly_Income	55000
Loan_Type	Home Loan

9. Sample Business Record – Continued

Attribute	Sample Value
Existing_Liabilities	Car Loan, Credit Card Dues
Purpose_Of_Loan	Funds required for home renovation and furniture purchase.
Preferred_Callback_Time	5:00 PM
Consent_For_Credit_Check	Checked (Agreed)

The sample values above demonstrate how the business requirements are represented as structured form data. The actual Zoho Creator implementation is documented in the implementation-evidence pages that follow.

10. Implementation Evidence

The following screenshots are the actual Zoho Creator evidence supplied for the Loan Application & Pre-Screening Management application. They show the Form Builder, live form, and submitted report record.

Note: The supplied report screenshot currently shows one submitted record. The assignment specification asks for at least three submitted records in the final lab record; two additional records should be submitted in Zoho Creator before final college submission.

11. Expected Learning Outcomes

- Understand the purpose and appropriate use of each Basic Field in Zoho Creator.
- Structure a financial-services form into logical, applicant-friendly sections.
- Configure mandatory, format, range, and date-related validations at field level.
- Understand how form values become records in a report and support loan pre-screening.
- Apply low-code data-modelling principles to a realistic banking workflow.

12. Result

The **Loan Application & Pre-Screening Management** application was designed in Zoho Creator using all thirteen Basic Fields specified for the exercise. The form is organized into four logical sections, the required field-level validations are configured, and submitted applicant information is stored in the application report for review and pre-screening.

Conclusion

This experiment demonstrates how a paper-based loan enquiry process can be converted into a structured low-code business application. By modelling applicant, contact, employment, income, loan, liability, and consent information as typed form fields, Zoho Creator provides a consistent way to collect and review loan enquiries. The resulting report gives loan officers a structured starting point for filtering applications and proceeding to document verification.
